SafeNSound Scan-Scan

With SafeNSound barcode scanning you can be sure you capture the right information at the right time.

Patient wristbands have become an essential part of patient care in hospitals. They are used for a variety of purposes like medication administration, labs, bedside procedures, etc. Imagine if you could use the wristband to electronically admit a patient, transfer that patient to another device in another unit, and record their discharge.

With the scanning process, available within SafeNSound, you can be sure you have the **right patient** assigned to the **right device** feeding data to the **right patient record** and assigned to the **right caregiver** at the **right time**.
